Core Challenges Summary

Slide Content: ISAC Obstacles

Interference

Sensing and communication share resources, causing mutual interference needing dynamic beamforming, scheduling, and AI-adjusted real-time waveforms.

Hardware

Non-linear effects and phase noise in mmWave/THz bands limit performance, and full-duplex designs must address self-interference.

Slide Content: ISAC Obstacles

Protocol Issue

Missing cross-layer protocols hinder multi-vendor interoperability, highest priority per Table VIII.

Privacy Problem

Privacy frameworks lacking, prominent in human-centric sensing applications (pages 25,28).

Slide Content: ISAC Obstacles

KPI Unification

3GPP needs to unify sensing (e.g., detection probability) and communication KPIs (e.g., throughput).

Slide Content: Future ISAC

Evolution Phases

Shifts from data transmission to task-relevant info extraction, evolving in three phases.

Focus Areas

Currently focused on constrained scenarios like industrial robots, long-term goal to quantify task-critical info with "semantic entropy".
